To increase 12 volts to 24 volts, you will need to use a boost converter or a fixed-voltage step-up regulator, which is basically just a boost converter set to a specific voltage and usually installed in some sort of housing. If you require a reduction from 24 volts to 12 volts, refer to the.

Has anyone come across a small 24V inverter device, or can help with a circuit to produce enough 24V AC current from 12V DC to drive up to 8 of these solenoids?

The easiest solution would be to use a pure sine 120V automotive inverter and a step-down transformer as normal. I'm guessing there are.
