# **Afghanistan Household Energy Storage Project**

## Overview

---

Homeowners across Afghanistan are set to benefit from the country's first pay-as-you-go (PAYG) home solar systems combined with energy storage batteries, being delivered in a pioneering new programme. What is the Afghanistan household & enterprise energy diaries study?

The Afghanistan Household and Enterprise Energy Diaries Study is a longitudinal research project on energy and electricity patterns, which represents Activity 3 of the Afghanistan Energy Study (AES), supported by the World Bank and managed by the AES Committee.

Do solar home systems provide basic electricity services in Afghanistan?

On the other, the ubiquitous diffusion of standalone solar home systems that, as further corroborated by this survey, provided most of rural Afghans with access to basic electricity services.

Why are solar home systems so expensive in Afghanistan?

There have been no minimum standards guarantee for solar home systems in Afghanistan, meaning solar is often synonymous with low-quality electricity provision. It is also often considered expensive to maintain due to the low quality and short-lasting components. Solar devices are usually unable to power large appliances, such as refrigerators.

Does solar power increase grid electricity in Afghanistan?

Along with increasing grid electricity, this appears driven in large part by the expansion in solar home systems. Two-thirds of households in the research sample have access to solar electricity, almost all as their primary source of electricity. This is one of the most important pieces of the Afghanistan Energy puzzle.

Are cheap solar panels a problem in Afghanistan?

There has been a remarkable rise of solar in Afghanistan, with even the

poorest households in the sample possessing a cheap solar panel and battery set. Solar solutions do come with a range of issues. The cheap solar home systems are becoming synonymous with low quality electricity.

Why is electricity important in Afghanistan?

Higher load tools such welding machines, and appliances such as refrigerators, were much more dependent on accessing grid electricity or generators. Electricity is the major component of household and enterprise energy usage in Afghanistan and shapes the lives and livelihoods of people across the country.
