Australian power generation and energy storage projects

Overview

Australia's solar and energy storage sectors delivered strong performance during the third quarter of 2025, with grid-scale solar generation reaching 1,699MW average output while battery storage systems expanded capacity by 2,936MW since Q3 2024. What is the largest battery energy storage project in Australia?

The battery energy storage system project is currently the largest battery energy storage project in Australia under construction. It is planned at Powell Creek to stabilise and store electricity generated from a six-gigawatt solar farm in the Barkly region.

Which mega-projects are leading the battery storage boom in Australia?

Several mega-projects are leading this battery storage boom. Notable upcoming BESS projects in Australia include the Australia-Asia Power Link BESS, the Denman BESS, Nebo Battery Energy Storage, and the Eastern Hub Firming BESS. These developments represent capacities ranging from hundreds of megawatts to multiple gigawatts.

What is Australia-Asia Power Link Bess?

Australia-Asia Power Link BESS The Australia-Asia Power Link BESS is part of SunCable's proposed solar power and transmission project connecting the Northern Territory to Darwin and Singapore. The battery energy storage system project is currently the largest battery energy storage project in Australia under construction.

What is a battery energy storage system (BESS) project?

A Battery Energy Storage System (BESS) project involves installing electrochemical batteries, often at a utility scale, to store energy for later use. What is the largest renewable energy project in Australia?

What are Australia's large-scale Bess projects?

Australia's large-scale BESS projects include Australia-Asia Power Link BESS (5000-7000 MW), Hillview (Eastern Hub) Firming BESS (1000 MW), Denman Battery Energy Storage System (2400 MW), Nebo Battery Energy Storage (900 MW).

Are new generation and storage projects going up?

New generation and storage projects in the final commissioning stage have jumped 5.5 GW year-on-year, up from 1.5 GW in the 2024 March quarter to 7 GW at the end of the March 2025 quarter.
