Battery Energy Storage Systems, or BESS, help stabilize electrical grids by providing steady power flow despite fluctuations from inconsistent generation of renewable energy sources and other disruptions. While BESS technology is designed to bolster grid reliability, lithium battery fires at some.

Lead-Acid Batteries: These are the heaviest option and require specific shelving due to fluid and gas vents. They can suffer permanent damage if discharged below 50%, making them less suitable for high-demand applications. **Lithium-Ion Batteries:** These are more energy-dense and lighter, offering.
