# Battery cabinet does not eject new batteries

Standard 20ft containers

Standard 40ft containers

## Overview

---

I opened the Battery Compartment, inspected the batteries, closed them back up in the camera and then initialized the camera (out of weather) successfully. At that point I noticed the batteries were stuck.

I opened the Battery Compartment, inspected the batteries, closed them back up in the camera and then initialized the camera (out of weather) successfully. At that point I noticed the batteries were stuck.

It's frustrating and inconsistent, I haven't found a cause for it. I'd keep it. Buy an external battery set up, either a solar/lithium or external lead acid and a power cable. It will only need the internal if that dies. No way I'd send it back, you'll have to pay shipping both ways I'm sure. And.

Went to eject the battery case and the button is faulty and won't eject. Essentially it's stuck in place no matter how hard I press on the internal button. Wyze was no help because I was out of warranty and literally the first time I went to eject it (aside from initial opening) and it doesn't.

New EG4 battery cabinet problems?

I recently purchased 6 EG4 batteries and the cabinet to go with them. At first because it arrived with a big forklift dent and the bus bar bolts all stripped out, I thought maybe it had been kicked around a warehouse somewhere until someone decided to send it to.

Now both draining cams have been working flawlessly since we installed the shield. Update on my camera issues. Three days ago, I replaced the Batteries with the Tactacam lithium battery pack that I charged up. In less than 24 hrs I was down to 90% And it's been that way for 2 days. However, I am.

On the 1000 mm wide classic battery cabinet, remove two screws to open the left door. Lockout/Tagout the battery breaker in the OFF (open) position. Remove the breaker protection plates. Remove the terminal cover from the left side of the battery breaker. Disconnect and remove the DC cables, N.

The batteries are housed in a single free-standing cabinet. The battery cabinets are shipped with or without lithium ion batteries installed. Removable battery modules reduce battery maintenance time. A DC-rated circuit breaker within each cabinet provides protection and servicing isolation. Figure.

## Battery cabinet does not eject new batteries

There are 2 springs under the battery holder that make contact with the battery pack to power the safe. I did have to press fairly hard to release it and found it a bit easier if I was pressing closer to the bottom ...

When I tried to eject the battery pack it would not budge so I had to use a putty knife to pry it out. At this time, I had the camera inside my house next to the heater for a day ...

That could be due to the battery disconnect solenoid or rotary switch, depending on the type you have. If your RV uses rocker-style switches to operate the disconnect solenoids, those should ...

I opened the Battery Compartment, inspected the batteries, closed them back up in the camera and then initialized the camera (out of weather) successfully. At that point I noticed ...

Disconnect and remove the battery cables from the right side of the battery breaker. Refer to the connection diagram on the inside of the front door of the classic battery cabinet.

When batteries other than a matching battery cabinet are used, a remote battery disconnect switch with overcurrent protection is required per the National Electrical Code.

Sometimes it helps to push down a bit on the battery and see if that releases it. If that does not work, use a pair of hemostats or tweezers and try to pull it out with the release ...
