

## PDEOZE PowerContainer

# Battery cabinet installation site for weak current room

## Overview

---

Where should storage batteries be located?

Storage batteries shall be located within a protective enclosure or area accessible only to qualified persons. A protective enclosure can be a battery room, control building, or a case, cage, or fence that will protect the contained equipment and limit the likelihood of inadvertent contact with energized parts.

How to keep the temperature low in a battery room?

Therefore, it is important to keep the temperature as low as possible by not locating battery rooms near power transformers, boilers, turbines or any other exothermic/heat-releasing industrial equipment or process. Also take into account sunny facades etc.

What is a battery room?

A battery room is a constructive element that must have not only design considerations and a logic of use, but also must comply with specific safety regulations. Logical, isn't it?

.

Do flooded batteries need a separate enclosure?

Normally we follow National Electric Safety Code (NESC). Section 18 of this code specifies that the batteries (flooded) should be in a separate enclosure and further says that this protective enclosure can be a battery room with separate continuous ventilation.

Is the battery room open or closed?

Keep in mind that the battery room is usually closed with little air circulation and not much traffic.

Can a battery room be non-classified?

If the room's ventilation is sufficient to prevent a build up of hydrogen gas, then the area can be non-classified. But given the small cost of explosion proof lights, switches and receptacles, it is cheap insurance to use them in the battery room.
