# Cambodia phase change energy storage system cost

## Overview

---

How Battery Storage Changes the Game Battery Energy Storage Systems (BESS) could slash Cambodia's peak energy costs by 40% while enabling renewable integration.

How Battery Storage Changes the Game Battery Energy Storage Systems (BESS) could slash Cambodia's peak energy costs by 40% while enabling renewable integration.

Many Cambodian businesses use diesel generators as backup power, paying up to \$0.35/kWh – triple Vietnam's industrial electricity rates. A textile factory in Phnom Penh we studied spends \$18,000 monthly on diesel during grid outages. These stopgap solutions aren't just expensive; they're literally.

It resulted in a competitive tariff of \$0.03877 cents per kilowatt-hour (kWh), the lowest tariff for a solar project so far recorded in Southeast Asia and below Cambodia's average cost of supply \$0.083 per kWh in 2019. ADB's Private Sector Operations Department is currently undertaking due.

To address the issue of energy instability in the region, GSL ENERGY delivered and completed a 32kWh mobile solar energy storage system for local customers in July 2025, helping businesses achieve energy independence and optimize electricity costs. In this project, the client selected two GSL-W-16K.

Huawei Digital Power has successfully commissioned what it claims is Cambodia's first grid-forming battery energy storage system (BESS) certified by TÜV SÜD. The newly completed 12MWh energy storage project, which was developed in collaboration with SchneiTec, a renewable energy developer, features.

g its commitment to clean energy transition. Battery Energy Storage Systems are a critical element to increasing the reliability of grids and accommodating the variable renewable energy sources that are needed to power economic development provided \$6 million in technical assistance. ADB funding has.

Battery Model: GSL-W-16K (2 units, each 16kWh, totaling 32kWh) Features:

Wheel design for easy mobility and deployment; built-in button screen for intuitive operation; supports parallel expansion Inverter Brand: Solis (high compatibility, stable performance) Application Scenarios: Small factories. Can battery energy storage be used to power Cambodia's grid?

“The battery energy storage system will showcase how large-scale deployment of innovative technology applications can be used to operate Cambodia’s grid in the future and generate more renewable power.”.

Does Cambodia need a new transmission infrastructure?

While Cambodia has made significant progress in expanding lower-cost power generation in the past 15 years, its existing transmission infrastructure is reaching capacity and needs to be expanded and reinforced to avoid supply interruptions.

How much money does ADB give to Cambodia's energy sector?

Since 1994, ADB has awarded nearly \$200 million in loans and grants to Cambodia’s energy sector and provided \$6 million in technical assistance. ADB funding has focused on expanding transmission and distribution networks and support for sector reforms and institutional capacity building.

What is the Electricite du Cambodge project?

The project will help the Electricite du Cambodge, Cambodia's national electricity utility, strengthen its transmission infrastructure by financing the construction of four 115–230 kilovolt transmission lines and 10 substations in Phnom Penh and Kampong Chhang, Kamong Cham, and Takeo provinces.

How can ADB help Cambodia in power system planning?

“The Grid Reinforcement Project, along with ADB’s ongoing assistance to Cambodia in power system planning, shows that adequate, reliable, and environmentally sustainable power supply can be provided at a reasonable cost to support equitable development,” said ADB Country Director for Cambodia Sunniya Durrani-Jamal.
