# **Can a 12V inverter use 17V**

## Overview

---

The 12 volt solar panels have an open circuit voltage about 17 Volt. All the 12V inverters have an input range 10 to 15 volt, and 17 volt is an overvoltage. Are all power inverters compatible with all car batteries?

No, not all power inverters are compatible with every car battery. It's essential to choose an inverter with the correct input voltage (typically 12V DC for most car batteries). Additionally, the inverter's wattage should be appropriate for the devices you plan to power. Exceeding the inverter's power limit can cause overheating or damage.

Should I use a separate 12V to 120V inverter?

Anyway, I would prefer using a separate 12 V to 120 V inverter because of the idle consumption. - Can you measure the idle consumption of the ANSEE power inverter. However, after a couple of minutes, the Tesla will go to sleep and the 12v socket will be turned off.

How many volts does a 16V inverter have?

There is no specific 16V inverter, so I purchased 3 different 12V-24V inverters which also took into account any voltage variation. I tested both the front/rear 16V outlets getting anywhere from 14.2V - 15.7V depending on the battery voltage.

How to choose a car power inverter?

**Battery Size and Health** – If your vehicle's battery is old or small, it might struggle to support larger car power inverters—especially when the engine isn't running. **Inverter Type** – Decide between pure sine wave and modified sine wave depending on what you're powering.

How long does a power inverter run on a car battery?

The runtime of a power inverter on a car battery depends on the battery's capacity (measured in amp-hours) and the power demands of the devices

being used. For example, if you use a 100W device, a fully charged 12V car battery with 50Ah capacity could run the device for around 4-5 hours.

Do you need a deep cycle battery for a car power inverter?

Many RVers and off-grid travelers install a separate deep-cycle battery specifically for their car power inverters. These batteries are designed to be discharged and recharged repeatedly without damage. There are compact battery monitors that let you keep tabs on your charge level in real-time.
