How energy storage system model is related to new energy stations?

The establishment of an energy storage system model is related to the revenue of new energy stations. This paper starts from the energy storage revenue model and energy storage cost model, and refines the energy storage system model.

What is the optimal configuration for energy storage?

The optimal configuration for power and maximum continuous energy storage duration is determined to be 30.99 MW and 4.52 h, respectively. At this configuration, the average daily return is  $2.362 \times 10^5$  yuan and the initial investment cost is  $1.45 \times 10^9$  yuan. Fig. 20. Optimal solution selected by TOPSIS. Table 4. Optimal solution data.

What is a new energy station?

New energy stations include renewable energy sources such as wind power and photovoltaic, gas turbine power generation, and energy storage system charging and discharging. During the normal operation of new energy stations, each equipment must meet its own constraints.

What is energy storage capacity?

The quantity of electrical energy stored in an energy storage facility plays a critical role in sustaining the operation and functionality of energy storage systems. The power capacity of a facility can be determined by considering its output/input power, conversion efficiency, and self-discharge rate.

Are energy storage systems flexible?

The integration of renewable energy units into power systems brings a huge challenge to the flexible regulation ability. As an efficient and convenient flexible resource, energy storage systems (ESSs) have the advantages of fast-response characteristics and bi-directional power conversion, which can

provide flexible support for the power system.

How can energy storage improve the operation of new energy stations?

The configuration of energy storage in new energy stations can effectively improve the operational efficiency of new energy stations, promote the consumption of new energy, and ensure the normal and stable operation of new energy stations. Currently, research on energy storage is also a hot topic [18, 19, 20, 21, 22, 23].
