In 2025, the typical cost of a commercial lithium battery energy storage system, which includes the battery, battery management system (BMS), inverter (PCS), and installation, is in the following range: \$280 - \$580 per kWh (installed cost), though of course this will vary from region to region.

In 2025, average turnkey container prices range around USD 200 to USD 400 per kWh depending on capacity, components, and location of deployment. But this range hides much nuance—anything from battery chemistry to cooling systems to permits and integration. Let's deconstruct the cost drivers.

Buyers typically pay a broad range for utility-scale battery storage, driven by system size, chemistry, and project complexity. The price per kWh installed reflects balance of hardware, permitting, and integration costs. Cost also hinges on duration, interconnection requirements, and regional labor.

1) Total battery energy storage project costs average £580k/MW 68% of battery project costs range between £400k/MW and £700k/MW. When exclusively considering two-hour sites the median of battery project costs are £650k/MW. Get full access to Modo Energy Research Book a demo to get full access.
