Côte d'Ivoire's energy storage installed capacity in 2025

Overview

Why is Ivory Coast investing 2021-2025 in energy infrastructure?

This comes as the Ivorian government prioritizes infrastructure development to maintain the country's high rate of economic growth. In 2021, Ivory Coast launched its National Development Plan 2021-2025, which calls for an investment of \$20 billion towards energy infrastructure.

Will Côte d'Ivoire have a low-cost solar system?

In the case of a low-cost solar scenario, PV capacity is up to 24 GW and storage is nearly 15 GW between 2030 and 2050. In closing its economic gap with emerging markets, Côte d'Ivoire will face a substantial increase in electricity demand over the next three decades.

Will solar power supply increase in Côte d'Ivoire by 2050?

We develop a TIMES model of the electricity sector for Côte d'Ivoire that provides least-cost solutions for power systems. Our estimates show that electricity demand could increase by a factor of 4.5 by 2050. Least cost solutions show that solar PV could provide at least 18% of total electricity generation in 2050.

How much energy does Côte d'Ivoire consume per capita?

In the same period, annual consumption per capita went from 174 KWh to 277 KWh (AIE, 2014; ANARE-CI, 2017). However, as of 2014, per capita consumption in Côte d'Ivoire is 43% lower than the average for sub-Saharan Africa and 91% lower than the world average.

Does Côte d'Ivoire export electricity?

Côte d'Ivoire is the third largest electricity market in West Africa and has historically been a net exporter of electricity with 11.8% of its total electricity generation sold to Mali, Burkina Faso, and Ghana in 2019 (ANARE-CI, 2020).

2.1.2. Future cost assumptions Fig. 2 presents the long-term cost assumption

for our analysis.

Will Côte d'Ivoire have an energy mix in 2050?

This scenario aims to mimic an energy mix in 2050 similar to that of today, where gas represents roughly two-third of the total supply. As previously states, natural gas has the advantage of a well-structured and familiar decision-making process and value chain in Côte d'Ivoire.

Côte d'Ivoire's energy storage installed capacity in 2025

This comes as the Ivorian government prioritizes infrastructure development to maintain the country's high rate of economic growth. In 2021, Ivory Coast launched its National Development Plan 2021-2025, which calls for an investment of \$20 billion towards energy infrastructure.

In the case of a low-cost solar scenario, PV capacity is up to 24 GW and storage is nearly 15 GW between 2030 and 2050. In closing its economic gap with emerging markets, Côte d'Ivoire will face a substantial increase in electricity demand over the next three decades.

This scenario aims to mimic an energy mix in 2050 similar to that of today, where gas represents roughly two-third of the total supply. As previously states, natural gas has the

advantage of a well-structured and familiar decision-making process and value chain in Côte d'Ivoire.

But gas production in Côte d'Ivoire does not meet domestic power demand so it is mainly imported from Nigeria. The Government of Côte d'Ivoire is determined to change the ...

As technology costs keep falling and policies improve, experts predict Cote d'Ivoire could host 15-20 storage facilities by 2030. The race is on to capture this \$120M market opportunity!

Set to commence operation by Q3 2025, the project stems from an agreement signed in January 2024 with renewable energy company PFO Africa and is supported by Germany and the EU.

Cote D'Ivoire Residential Energy Storage System Industry Life Cycle Historical Data and Forecast of Cote D'Ivoire Residential Energy Storage System Market Revenues & Volume By Type for ...

The tenders were announced on May 30, 2025, as part of the country's push to increase renewable energy and improve grid stability. The projects will be awarded under 25-year ...

Set to commence operation by Q3 2025, the project stems from an agreement signed in January 2024 with renewable energy company PFO Africa and is supported by ...

In the case of a low-cost solar scenario, PV capacity is up to 24 GW and storage is nearly 15 GW between 2030 and 2050. In closing its economic gap with emerging markets, ...

Ivory Coast has opened tenders for 200 MW/66 MWh of solar-plus-storage, seeking proposals for two 100 MW solar parks each connected to 33 MWh of storage.

For most countries and technologies, the data reflects the capacity installed and connected at the end of the calendar year. Data has been obtained from various sources, including an IRENA ...
