

PDEOZE PowerContainer

Dual-stage outdoor power supply

Overview

What is a dual input power supply?

About our Dual Input Power Supplies Our dual input power supplies are designed for unique applications that require to operate from either a DC voltage or AC voltage source. As with our industrial grade supplies, these are able to operate in adverse weather condition and extreme temperature ranges.

How many Watts Does a dual input power supply module use?

Other options can include mounting the dual input power supply module into u-channel or enclosed chassis including an IP67 ingress rated chassis for improved weatherproofing. Our typical power range for the DI series is 100 watts to 300 watts, mostly single output.

Does TSI power offer outdoor xups?

TSI Power's Outdoor XUPS series of rugged outdoor uninterruptible power supplies is the ideal way to supply backup power in extreme environments. TSI Power offers a comprehensive suite of accessories for the Outdoor XUPS. Mounting brackets, battery heaters, maintenance bypass switches, security solutions, and more are available.

How do you mount a power supply?

Mount them to the DIN rails inside industrial cabinets and electrical panels, or unscrew the DIN clips to mount to any flat surface. All of these power supplies use switching regulation, which means they produce the stated voltage despite fluctuations in your input power and the power being drawn by your system, and they won't become too hot.

What accessories does TSI power offer?

TSI Power offers a comprehensive suite of accessories for the Outdoor XUPS. Mounting brackets, battery heaters, maintenance bypass switches, security

solutions, and more are available. Explore our support materials, documents, and specs.

How many Watts Does a di power supply use?

Our typical power range for the DI series is 100 watts to 300 watts, mostly single output. As with all of our series, this is high configurable power supply and can be easily modified to meet other industrial applications. As a special note, we have built a 1640 watt dual input version that we recently delivered to Goddard Flight Systems.
