What is the Energy Star product specification for uninterruptible power supplies?

Following is the Version 2.0 ENERGY STAR Product Specification for Uninterruptible Power Supplies (UPSs). A product shall meet all of the identified criteria if it is to earn the ENERGY STAR. Static UPS: UPS where solid-state power electronic components provide the output voltage.

What is an energy storage system (ESS)?

Covers an energy storage system (ESS) that is intended to receive and store energy in some form so that the ESS can provide electrical energy to loads or to the local/area electric power system (EPS) when needed. Electrochemical, chemical, mechanical, and thermal ESS are covered by this Standard.

Which NFPA standards address energy storage systems?

NFPA Standards that address Energy Storage Systems Research on Energy Storage Systems from the Research Foundation Reports: Lithium ion batteries hazard and use assessment Phase I (2011), Phase II (2013), Phase III (2016). Webinars REGISTER NOW!.

What is an uninterruptible power supply?

Uninterruptible power supplies or UPSs are battery chargers consisting of a combination of convertors, switches and energy storage devices (such as batteries), constituting a power system for maintaining continuity of load power in case of input power failure. 10 CFR 430 Appendix Y 2.27.

Are energy storage systems viable and economically reasonable?

However, such storage systems become viable and economically reasonable only if the grids have to carry and distribute large amounts of volatile electricity from REs. The first demonstration and pilot plants are currently under construction (e.g. in Europe).

How does NFPA keep pace with energy storage and solar technology?

NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise.
