Energy storage product range

Overview

Commercially available energy storage products encompass a wide range of technologies designed to capture and store energy for later use. 1. Lithium-ion batteries, 2. Flow batteries, 3. Compressed air energy storage (CAES), 4. Pumped hydro storage, 5. Thermal energy storage.

Energy storage systems (ESS) might all look the same in product photos, but there are many points of differentiation. What power, capacity, system smarts actually sit under those enclosures?

And how many of those components actually comprise each system?

The number of options – from specialized.

The top energy storage technologies include pumped storage hydroelectricity, lithium-ion batteries, lead-acid batteries and thermal energy storage. Electrification, integrating renewables and making grids more reliable are all things the world needs. However, these can't happen without an increase.

While pumped hydroelectric storage dominates utility-scale applications (accounting for about 95% of all large-scale storage in the US), lithium-ion batteries have revolutionized residential and commercial options due to their versatility and declining costs. When making an energy storage.

We design products to solve customers' current – and future – storage needs. Our energy storage products enable customers to scale at speed while realizing a growing range of benefits. Offering multiple technology options. Supporting large and expanded projects. Adjustable to new market.

Fluence is enabling the global clean energy transition with market-leading energy storage products and services, and digital applications for renewables

and storage. Fluence offers an integrated ecosystem of products, services, and digital applications across a range of energy storage and renewable.
