

## **PDEOZE PowerContainer**

# **Faraday Future Cooling Battery Cabinet**

## Overview

---

What is Faraday Future?

Established in May 2014, Faraday Future (FF) is a California-based global shared intelligent mobility ecosystem company, headquartered in Los Angeles. FF's vision is to create a shared intelligent mobility ecosystem that empowers everyone to move, connect, breathe, and live freely.

What temperature should battery cells be cooled?

The battery cells perform their best at temperatures near 25°C (77°F), and, as they release or store energy, they tend to get hot, so the cooling scheme becomes a crucial part to ensure top performance during the useful life of the vehicle. As the VPA was designed, we explored numerous different cooling methods.

Can a production-intent battery pack perform without external cooling?

In our run up the formidable Pikes Peak, we established a record (without externally cooling the pack) and demonstrated that our production-intent battery pack can perform in demanding conditions and maintain an optimal environment for the cells.

How reliable is our battery pack technology?

We've tested our pack in cold weather, drove it through Death Valley, from Los Angeles to Las Vegas without stopping for charging, and accomplished many other test drives on that have given us the confidence to say that our battery pack technology is as robust and reliable as we envisioned it to be when we first started this company.

## Faraday Future Cooling Battery Cabinet

The Battery Pack is a key system of the VPA and in the FF 91 it supports many of the main functions that make it an extraordinary vehicle.

This state-of-the-art energy storage system represents the pinnacle of modern battery engineering. Housed within its robust and sleek cabinet is a sophisticated system designed for ...

MIVOLT will provide FF with advanced dielectric coolant materials that will support FF's

existing patented liquid cell submerged onboard cooling system, which includes a self-contained and

Electric vehicle (EV) startup has partnered with MIVOLT for a fully submerged battery cooling system for the FF 91 luxury EV, the company announced in a press release on ...

In summary, FF's battery technology doesn't sacrifice range for performance. Outfitted with a 130 kWh battery, FF 91 has an estimated range of over 300 miles. Similarly, ...

As governments are looking to create a greener future, the demand for battery Electric Vehicles (EVs) is surging. However, meeting this demand comes with major challenges, like the cooling ...

Faraday Future (FF), a California-based global shared intelligent mobility ecosystem company, today announced that it is partnering with MIVOLT on a fully submerged ...

MIVOLT will provide FF with advanced dielectric coolant materials that will support FF's existing patented liquid cell submerged onboard cooling system, which includes a self ...

Modular forward-thinking components for all mobility and stationary storage needs. Conceived, evolved and manufactured in-house.

Faraday Future (FF), today announced that it is partnering with MIVOLT on a fully submerged battery cooling system for the FF 91 luxury EV.

High energy density battery cabinet liquid cooling technology The solution to this challenge is the advanced Liquid Cooling Battery Cabinet, a technology designed to provide precise and ...
