## Field inverter 12V to 400V

---

I am designing a transformerless inverter (800VA) for home application. I want to convert 12v DC /70A to 400VDC using a boost converter.

Discover 12v to 400v power inverters with pure sine wave output and MPPT technology. Ideal for solar energy systems, CE certified for safety.

View the TI TIDM-BIDIR-400-12 reference design block diagram, schematic, bill of materials (BOM), description, features and design files and start designing.

The DY400-DD400-13 is a 400V converter of 400W. The converter can convert 12V to 400V DC and supply a DC current of 1A.

Mouser offers inventory, pricing, & datasheets for 400 V Isolated DC/DC Converters.

I am wanting a DC to DC boost circuit that can take a variable 12-24v and turn that into around 300-400v @ 20-30mA. It doesn't matter the circuit type (flyback, flyboost, standard, etc). I just ...

It converts Direct Current (DC) from the battery to Alternative Current (AC) to power the electric motor. It can also be used in reverse mode to charge the battery by transforming ...

High-power AC-DC and DC-DC converter units with high efficiency and reliability. Modular units suitable for most modern applications.

It converts Direct Current (DC) from the battery to Alternative Current (AC) to power the electric motor. It can also be used in reverse mode to charge the battery by transforming kinetic energy from the vehicle into electrical ...

I am wanting a DC to DC boost circuit that can take a variable 12-24v and turn that into around 300-400v @ 20-30mA. It doesn't matter the circuit type (flyback, flyboost, ...

There is no problem going up from 12V to 400V providing you are not looking to source more than a few milliamps. 10mA at 400V is 4W and there are plenty of chips and step ...

A lot of inverters have an output called "modified sine wave". They contain an intermediate DC supply at around 400 V, or the inverter output can be rectified to get back to ...

While it's certainly possible to have a three phase inverter that converts 12V to three phases of 400V, consider the power that your pump needs:  $P = U \cdot I \sim 1 \text{ kW}$ .

The DY400-DD400-13 is a 400V converter of 400W. The converter can convert 12V to 400V DC and supply a DC current of 1A.
