Georgia Power is constructing several new battery energy storage systems to support energy capacity needs.

Georgia Power is constructing several new battery energy storage systems to support energy capacity needs.

Georgia Power recently announced that construction is underway for four new battery energy storage systems in strategic counties across the state to support energy capacity needs. The facilities, which are scheduled to begin operation in 2026, total 765 megawatts of additional storage capacity.

Our facility manufactures innovative, industrial-grade powering solutions through a diverse product line of large-scale battery systems, chargers and uninterruptible power supplies. Applications include power generation facilities, substations, electrical utilities, transportation systems.

Georgia Power leaders joined elected officials from the Georgia Public Service Commission (PSC), Georgia legislature, and Talbot and Muscogee counties on Thursday to mark commercial operation of the company's first "grid-connected" battery energy storage system (BESS). The Mossy Branch Battery.

Georgia's energy landscape is buzzing louder than a beehive in July, and battery storage companies are the queen bees. With utilities like Georgia Power committing to shut down coal plants and deploy 1,000+ MW of battery storage by 2025 [2], the state has become a testing ground for cutting-edge.

Located in Talbot County, the Mossy Branch BESS project will be run as a standalone unit. It will connect to and charge directly from the transmission grid, offering four hours of storage capacity. US utility Georgia Power has brought online its 65-MW/260-MWh Mossy Branch battery energy storage.

The Mossy Branch Battery Facility is capable of 65 megawatts (MW) of battery storage that can be deployed back to the grid over a four-hour period, adding resiliency to the state's power grid and helping ensure reliable energy for a

growing Georgia. Typical installations utilize around 0.5 acres.
