Heavy Industrial Energy Storage Vehicle Implementation Standards

Overview

What are the UL standards for energy storage systems?

UL 1973: Batteries for Use in Stationary and Motive Auxiliary Power Applications. Safety standard for modules and battery systems used in stationary energy storage systems. UL 9540, Energy Storage Systems and Equipment. Safety standard for energy storage systems used with renewable energy sources such as solar and wind.

What UL standards are used for EV charging?

Note 2: Outside of North America, additional standards may apply. These include IEC 62752, IEC 61851-1, and IEC 62196 series for conductive charging and the IEC 61980 series for wireless power transfer charging. Right now UL 916 points directly to UL 60730-1 for EV Charger Energy Management Systems.

What are the standards for EV charging infrastructure?

Most of the completed and ongoing standardization related to communications for EV charging infrastructure has taken place within SAE International and the ISO/TC 22/SC 31 - IEC/TC 69 Joint Working Group (JWG) which developed the ISO 15118 standards (see complete list below).

What is electric vehicle infrastructure deployment guidance?

Electric vehicle infrastructure deployment guidance CSA Group standards, research, policy briefs, and other resources Leverage the resources developed by CSA Group and its technical committees that provide information, guidance, best practices, and requirements to help support the safe, reliable, and efficient deployment of the BEV infrastructure.

What's new in energy storage safety?

Since the publication of the first Energy Storage Safety Strategic Plan in 2014, there have been introductions of new technologies, new use cases, and new

codes, standards, regulations, and testing methods. Additionally, failures in deployed energy storage systems (ESS) have led to new emergency response best practices.

What is the goal of the EV standards roadmap?

The hope is that this roadmap will be broadly adopted by the user community and that it will facilitate a more coherent and coordinated approach to the future development of standards for EVs. It is envisioned that the roadmap be widely promoted and that some mechanism be established to assess progress on its implementation. Chapter 2.
