Cumulative installed solar capacity, measured in gigawatts (GW). Total solar (on- and off-grid) electricity installed capacity, measured in gigawatts. This includes solar photovoltaic and concentrated solar power. IRENA (2025) - processed by Our World in Data The renewable power capacity data.

The United States has more than 2,500 utility-scale solar photovoltaic (PV) electricity generating facilities. Most of these power plants are relatively small and collectively account for 2.5% of utility-scale electric generating capacity and 1.7% of annual electricity generation, based on data.

A Megawatt (MW) is a unit of power equal to one million watts (1,000,000 watts). It is commonly used to measure the power output of large power plants, wind turbines, solar farms, and other large-scale power generation equipment. MW is a standard unit for describing energy scales in the electricity.
