Overview

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar.

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar.

Solar panels generate “free” electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873 after considering the full federal solar tax credit.

In this guide, we'll break down average solar costs per square foot in 2025, show how they compare by home size, explain why this metric has limits, and give you expert tips to reduce your price. Average U.S. solar cost per square foot in 2025: \$6 – \$12 after the 30% federal tax credit. Cost per.

Solar panel costs range from \$16,600 to \$20,500 for the average 6.5 kW system, but prices can vary from as little as \$7,700 for smaller solar systems to upward of \$34,700 for larger systems. To find the most up-to-date solar panel costs in 2025, we compared research from the U.S. Department of.

Each year, the U.S. Department of Energy (DOE) Solar Energy Technologies Office (SETO) and its national laboratory partners analyze cost data for U.S. solar photovoltaic (PV) systems to develop cost benchmarks. These benchmarks help measure progress toward goals for reducing solar electricity costs.

Solar panels cost \$3.00 to \$4.50 per watt installed on average, with homeowners spending about \$3.75 per watt before factoring in available solar incentives. A 6- to 10-kW solar panel installation costs \$12,600 to \$31,500 after the 30% federal tax credit. Solar panel prices depend on the size.

This guide is designed to demystify the costs associated with installing solar

panels for home power in 2025. As a leading resource in residential solar solutions, RenewGenius believes in empowering you with a comprehensive knowledge base. Here, we'll break down every factor so you can move forward. How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

How much does a home solar system cost?

In 2025, we surveyed 1,000 home solar customers across the U.S. to understand their experience shopping for and installing solar panel systems. Most homeowners said they paid around \$16,129 for a solar panel system, with an average of 14 solar panels installed.

How much does a solar system cost per watt?

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes.

How long do solar panels last?

Solar panels typically pay for themselves within 5 to 15 years. Factors that influence the payback period include electrical costs, the size and efficiency of your solar system, local incentives and tax credits, sun exposure, net metering, energy consumption and maintenance costs. How much do solar panels cost for a 2,000-square-foot home?

.

How much does solar cost in California?

Divide annual kWh by ~1,200 (typical kWh/year per kW of solar in much of California). In California, expect \$2.75 - \$3.50 per watt before incentives (solar panel cost in California). This gives your solar cost per square foot. Estimate your system size, price before and after incentives, and cost per square foot.

How much do solar panels cost in 2025?

In 2025, the national average hovers around \$2.90 to \$3.50 per watt. Therefore, a typical 7-kilowatt (kW) system, suitable for an average-sized American home, would land in that price range. So, how much do solar panels cost for a house like yours?

The answer depends on several key variables that determine your final solar panel quote.

How much does a uniform size solar panel cost

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

As of publishing, the average cost per watt is \$2.84. Most solar companies set the price according to the solar system's wattage. A solar installation's "cost per watt" is a little like the "price per square foot" when you buy a house. It helps compare the value of solar energy systems in different sizes.

Solar panels typically pay for themselves within 5 to 15 years. Factors that influence the payback period include electrical costs, the size and efficiency of your solar system, local incentives and tax credits, sun exposure, net metering, energy consumption and maintenance costs. How much do solar panels cost for a 2,000-square-foot home?

Divide annual kWh by ~1,200 (typical kWh/year per kW of solar in much of California). In California, expect \$2.75 - \$3.50 per watt before incentives (solar panel cost in California). This gives your solar cost per square foot. Estimate your system size, price before and after incentives, and cost per square foot.

In 2025, the national average hovers around \$2.90 to \$3.50 per watt. Therefore, a typical 7-kilowatt (kW) system, suitable for an average-sized American home, would land

in that price range. So, how much do solar panels cost for a house like yours? The answer depends on several key variables that determine your final solar panel quote.

Based on our 2025 survey of 1,000 solar customers, the national average price for a single solar panel professionally installed is \$1,200. This means most full-size systems of between 20 and ...

Each of the eight cost categories is divided into up to 12 cost elements. Each cost element is the sum of a fixed cost that is independent of size plus a variable cost that is proportional to size.

Solar panel costs range from \$16,600 to \$20,500 for the average 6.5 kW system, but prices can vary from as little as \$7,700 for smaller solar systems to upward of \$34,700 for larger systems.

Residential solar panel systems cost \$0.09 to \$0.11 per kilowatt-hour (kWh) installed on average, though prices vary greatly depending on the type of panels and how much daily sun they receive. In comparison, the ...

In this guide, we'll break down average solar costs per square foot in 2025, show how they compare by home size, explain why this metric has limits, and give you expert tips to ...

Solar installation costs have dropped dramatically over the past decade - from over \$50,000 for a typical home system in 2010 to under \$30,000 today. Yet many homeowners still ...

So, how much do solar panels cost for a house like yours? The answer depends on several key variables that determine your final solar panel quote. No two homes are exactly alike, which ...

Residential solar panel systems cost \$0.09 to \$0.11 per kilowatt-hour (kWh) installed on average, though prices vary greatly depending on the type of panels and how much daily ...

How much do solar panels cost on average? As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This ...

According to EnergySage, the average cost of solar panels in California is approximately \$2.30 per watt. For a 5 kW system, this translates to a total cost of around ...

How much do solar panels cost on average? As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This ...

Each of the eight cost categories is divided into up to 12 cost elements. Each cost element is the sum of a fixed cost that is independent of size plus a variable cost that is proportional to size.

The average 6-kW residential solar panel installation is \$17,852 before incentives. Learn about cost factors, financing options, tax breaks and more.

In this guide, we'll break down average solar costs per square foot in 2025, show how they compare by home size, explain why this metric has limits, and give you expert tips to reduce your price.
