The battery is what powers your vehicle's electronics, making it one of the most important components. You can find the battery underneath the hood of your vehicle, typically in the engine bay. The exact location varies from model to model. When fiddling with the battery, make sure to disconnect.

And while the answer for most drivers is to look under the hood, that's not necessarily where your car battery is. In the ride-share car that Rich and Charles checked out earlier, the battery was actually in the trunk. And in some cars, the battery may even be under the front or back seat. If.

Most car batteries are located under the hood, typically near the front fenders or firewall. However, some vehicles—like trucks, EVs, or European models—place the 12V lead-acid battery in the trunk, under rear seats, or beneath cargo floors. Hybrids often have auxiliary batteries in cabin.

Where is a car battery located?

In most cars, the battery is fitted in the engine bay at the front of the car and to the side of the engine, either on the right or the left. In some cars, though, the battery is fitted in the boot for better weight distribution. On cars fitted with an engine in the.
