First of all, the key lies in clarifying “how much electricity you need to store” and “how long the system will supply power/discharge electricity”. In simple terms, it’s: how much electricity you need + how long you will use it. For instance, if my family needs to be equipped with energy storage.

The key metrics in life cycle calculation include: Depth of Discharge (DoD):
The battery version of "how hard did you party last night?"

" Cycle Count: Not all cycles are created equal—ask any lithium-ion cell!
Temperature Tantrums: Ever seen a battery swell in heat?

It's not pretty. Let's face it -.
