Installation of Bifacial solar Modules

Overview

Where can bifacial solar panels be installed?

Solar systems near reflective surfaces: Bifacial solar panels are particularly effective in environments with reflective surfaces like snow, sand, or water. Bifacial solar panel installation near these surfaces can maximize energy production by using reflected sunlight to generate more power.

What is the general manual for bifacial double glass solar modules?

This general manual provides important safety information relating to the installation, maintenance and handling of bifacial double glass solar modules (BiKu and BiHiKu series). Professional installer must read these guidelines carefully and strictly follow these instructions.

Can bifacial solar panels be installed vertically?

Vertical solar installations: Installing bifacial solar panels vertically can capture energy during different parts of the day, particularly in areas where the panels are oriented to take advantage of sunlight at various angles, such as the morning or evening sun.

What are the best applications for bifacial solar panels?

Here are some of the best applications for bifacial solar panels: Ground-mounted bifacial solar installations: Bifacial panels are well-suited for ground-mounted solar systems as they can capture sunlight reflected from the ground, increasing energy production. These systems allow for optimal tilt angles and heights, enhancing the albedo effect.

Where can I find the bifacial module installation manual?

Please retain this manual for future reference. We recommend visiting regularly for the most updated version of bifacial module installation manual. The information contained in this manual is subject to change by Canadian Solar Inc. without prior notice.

What are bifacial solar panels?

As the name suggests, bifacial solar panels are devices that feature photovoltaic cells on both the front and back sides, designed to capture sunlight from both directions. Unlike traditional monofacial solar panels, bifacial panels can absorb direct sunlight from the front while also utilizing light reflected from the ground or nearby surfaces.
