The average U.S. homeowner spends \$2,000 on a solar inverter, but costs range from \$1,000 to \$3,000 depending on the model and the number of inverters. A solar inverter makes up about 10% of the total cost of your solar energy system. Expect to spend \$0.15 to \$0.24 per watt on a solar inverter, not.

Take control of your energy costs with solar power. Solar panels make electricity from sunlight. But your home can't use that electricity directly. That's where solar inverters come in. Inverters are found in nearly every solar installation, from small residential systems to large utility-scale.

The size of your solar system (measured in kilowatts, or kW) directly impacts the size—and, therefore, the cost—of your inverter. Think of it like this: a small apartment needs a smaller AC unit than a large house. The same principle applies here. A larger solar array needs an inverter with a.

Downside: You'll need one per panel, so costs stack up fast—\$2,000-\$3,000 for a 10-panel system, plus install fees. 2. SolarEdge Home Hub Inverter SolarEdge is a fan favorite, and the Home Hub is their 2025 all-star. It's a string inverter, but here's the twist: each panel gets a power optimizer.
