Overview

What is Kiribati integrated energy roadmap?

The resulting Kiribati Integrated Energy Roadmap (KIER) highlights key challenges and presents solutions to make Kiribati's entire energy sector cleaner and more cost effective. As a small, remote island state, Kiribati is highly dependent on imported energy supply. Electricity is one of the government's largest expenditures.

Does Kiribati need electricity?

As a small, remote island state, Kiribati is highly dependent on imported energy supply. Electricity is one of the government's largest expenditures. Yet the current fossil fuel-based power system is inadequate to meet future demand.

Does Kiribati have biomass?

Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income settings. Kiribati: How much of the country's electricity comes from nuclear power?

Nuclear power – alongside renewables – is a low-carbon source of electricity.

What is the Kiribati Development Plan (KDP)?

The plan has been aligned with the Kiribati Development Plan (KDP) 2016-2019 to enable the achievement of both sector and national aspirations or outcomes especially related to infrastructure and utilities. As such, it will prove an invaluable reference for development partners in aligning their assistance objectives with the Ministry's activities.

How to evaluate a 5G energy-optimised network?

To properly examine an energy-optimised network, it is very crucial to select

the most suitable EE metric for 5G networks. EE is the ratio of transmitted bits for every joule of energy expended. Therefore, while measuring it, different perspectives need to be considered such as from the network or user's point of view.
