# **Latest distribution of solar energy storage projects**

## Overview

---

Since 2024, gigawatt-hour projects have been commissioned or started construction in not only the US and China, but also Saudi Arabia, South Africa, Australia, Netherlands, Chile, Canada and the UK.

Since 2024, gigawatt-hour projects have been commissioned or started construction in not only the US and China, but also Saudi Arabia, South Africa, Australia, Netherlands, Chile, Canada and the UK.

Developers and power plant owners plan to add 62.8 gigawatts (GW) of new utility-scale electric-generating capacity in 2024, according to our latest Preliminary Monthly Electric Generator Inventory. This addition would be 55% more added capacity than the 40.4 GW added in 2023 (the most since 2003).

There are more than 8,100 major solar projects currently in the database, representing over 340 GWdc of capacity. There are over 1,300 major energy storage projects currently in the database, representing more than 104,000 MWh of capacity. The list shows that there are more than 180 GWdc of major.

Since 2024, gigawatt-hour projects have been commissioned or started construction in not only the US and China, but also Saudi Arabia, South Africa, Australia, Netherlands, Chile, Canada and the UK. BloombergNEF expects additions to grow 35% this year, setting a record for annual additions, at 94.

Focuses on community-scale renewable energy projects, including community solar farms and energy storage projects connected to the distribution grid.  
'Synthetic' community solar?

New initiative will send solar power across state lines Ampion says its Synthetic Community Solar product can help.

- The U.S. Department of Energy (DOE) today released its draft Energy Storage Strategy and Roadmap (SRM), a plan that provides strategic direction and identifies key opportunities to optimize DOE's investment in future planning of energy storage research, development, demonstration, and deployment.

The ISA expects a surge of an additional 2,000GW in global solar capacity over the next four years. Over 800GW of solar energy reportedly remains untapped due to transmission challenges and a lack of adequate storage solutions. Credit: Bilanol/Shutterstock.com. The International Solar Alliance.

## Latest distribution of solar energy storage projects

---

Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy sources. Currently 23 ...

New data reveals the top five companies by US operating capacity - plus a list of five major projects scheduled to go live this quarter. The US energy storage market is one of ...

The International Solar Alliance (ISA) has pinpointed distributed renewable energy, battery storage, and floating solar projects as crucial elements in the global shift towards green ...

Energy storage resources have become an increasingly important component of the energy mix as traditional fossil fuel baseload energy resources transition to renewable energy ...

Berkeley Lab collects, cleans, and publishes project-level data on distributed\* solar and distributed solar+storage systems in the United States. The data are compiled from a variety of ...

Specifically, the draft Energy Storage SRM updates the earlier ESGC Roadmap in consideration of the progress made across the energy storage sector since 2020, as well as ...

Berkeley Lab collects, cleans, and publishes project-level data on distributed\* solar and distributed solar+storage systems in the United States. The data are compiled from a variety of sources, including utilities, state agencies, ...

Solar and energy storage are lower cost and twice as fast to deploy compared with competing types of generation, but large solar and storage projects still linger for years in ...

The global energy storage market is poised to hit new heights yet again in 2025. Despite policy changes and uncertainty in the world's two largest markets, the US and China, ...

New data reveals the top five companies by US operating capacity - plus a list of five major projects scheduled to go live this quarter. The US energy storage market is one of the dynamic and fast moving in ...

The International Solar Alliance (ISA) has pinpointed distributed renewable energy, battery storage, and floating solar projects as crucial elements in the global shift towards green ...

Solar and energy storage are lower cost and twice as fast to deploy compared with competing types of generation, but large solar and storage projects still linger for years in choked interconnection queues ...

There are over 1,300 major energy storage projects currently in the database, representing more than 104,000 MWh of capacity. The list shows that there are more than 180 ...

More than half of the new utility-scale solar capacity is planned for three states: Texas (35%), California (10%), and Florida (6%). Outside of these states, the Gemini solar ...

Discover community-scale solar farms and energy storage projects. Get the latest news on local renewable energy and distribution grid integration.

Specifically, the draft Energy Storage SRM updates the earlier ESGC Roadmap in

consideration of the progress made across the energy storage sector since 2020, as well as reflects DOE's recent ...
