Are there guidelines for storing lithium-ion batteries at home?

Yes, there are unique guidelines for storing lithium-ion batteries at home. Proper storage practices ensure the safety and longevity of the batteries. These guidelines help mitigate the risks of fire, overheating, and reduced battery lifespan. Storing lithium-ion batteries requires attention to temperature, humidity, and physical conditions.

Do lithium ion batteries need a battery room?

Lithium-ion batteries need a battery room if their capacity exceeds 20 kWh, according to fire codes. NFPA 855 outlines ventilation and safety requirements. Store batteries at a temperature of 59°F (15°C). Also, refer to NFPA 70E for further safety guidelines, and ensure proper exhaust ventilation for off-gas events.

Why do lithium based batteries need proper storage?

Lithium-based batteries need proper attention because improper storage can result in overheating and fire hazards, which can be dangerous to the environment and humans. Proper battery storage can lead to increased lifespan, safety, fast charging time, and efficient operation. Here are some key factors to consider when storing batteries.

Where should lithium batteries be stored?

Ideally, they should be stored in a well-ventilated area away from flammable materials. Some experts recommend using designated battery storage rooms that are insulated from heat sources. The United Nations recommends that lithium batteries be kept in areas with limited access to unauthorized personnel to mitigate risks.

Can Li ion batteries be stored with a 30% SoC?

Interestingly, the 2024 amendments to International Fire Code (IFC) regarding

Li-ion battery storage grant waivers to their storage requirements when Li-ion batteries are stored with an SOC that does not exceed 30%. Batteries with 30% or less charge are considered less hazardous for storage purposes and have less chance of catastrophic failure.

What temperature should a lithium ion battery be stored at?

**Temperature Control:** Temperature control is essential for the safe storage of lithium-ion batteries. These batteries should be kept in a cool, dry place, ideally at temperatures between 15°C and 25°C (59°F to 77°F). High temperatures can lead to thermal runaway, a condition where the battery overheats and can potentially catch fire.
