Overview

President Lazarus Chakwera on Monday rolled out the \$20 million (about K35 billion) Battery Energy Storage System (Bess) at Kanengo in Lilongwe, capable of storing 20 megawatts (MW) of power which can be used during peak hours. What is the Malawi Bess project?

The Malawi BESS project will guide the scale-up of BESS projects in the Consortium's participating countries. To alleviate energy poverty by 2030 and save a gigaton of CO2 in low and middle-income countries, it is estimated that 90 GW of BESS must be developed to support the required 400 GW of renewable energy.

How much does a Bess system cost?

As of most recent estimates, the cost of a BESS by MW is between \$200,000 and \$450,000, varying by location, system size, and market conditions. This translates to around \$200 - \$450 per kWh, though in some markets, prices have dropped as low as \$150 per kWh. Key Factors Influencing BESS Prices.

Is Malawi a proof point for geapp's Bess project?

By breaking ground for this BESS project (and its subsequent completion expected in 2025), Malawi is an important proof point for the BESS Consortium launched by GEAPP at COP28 to secure 5 gigawatts (GW) of BESS commitments in low and middle income countries (LMICs) by the end of 2024.
