Middle East Mobile Power Station Type Power Generation

Overview

What is changing in the Middle East's power sector?

This thought-provoking report will broaden the understanding of any audience confronting the changing dynamics of the Middle East's power sector. The power market is transforming as energy independence and economic diversification play a bigger role.

Is the Middle East ready for a new era of electricity?

There is enormous potential for the Middle East's power sector, and plenty of room for a variety of new technologies and companies to help move into electricity's new era.

How many new power plants will the Middle East need?

The Middle East will need to construct 277 GW of new power plants in this time frame, while also considering a replacement for ageing infrastructure. In addition to new-build plants, there is a great deal of potential for brownfield plants.

Does the Middle East have a power supply?

Yet as the Middle East is flush with cheap natural resources, the region's power makeup is still almost exclusively dominated by oil and gas.⁴ The region currently uses oil and natural gas to meet 97 percent of its electricity needs. Economic growth hinges upon connectivity and power generation.

Can digital technology improve the power sector in the Middle East?

Overall, digital technologies provide a great deal of opportunity for the global power sector worth billions of dollars. The Middle East is ripe with these opportunities which not only help increase the reliability of the power sector, but also the region's individual economies.
