# New Energy Storage Charging Sales

## Overview

---

What is a battery energy storage system - new energy for a new era?

Cushman & Wakefield has released its China Battery Energy Storage System (BESS) Market - New Energy for a New Era report. A Battery Energy Storage System (BESS) secures electrical energy from renewable and non-renewable sources and collects and saves it in rechargeable batteries for use at a later date.

When does an energy-storage system charge?

An energy-storage system charges when wind power or photovoltaic power generates a large volume of electricity or when the power consumption is low, and it discharges otherwise.

What is a battery energy storage system?

A Battery Energy Storage System (BESS) secures electrical energy from renewable and non-renewable sources and collects and saves it in rechargeable batteries for use at a later date. When energy is needed, it is released from the BESS to power demand to lessen any disparity between energy demand and energy generation.

What does 'new energy storage' mean for China?

Trade body China Energy Storage Alliance (CNESA) said last week (15 January) that 'new energy storage' capacity reached 78.3GW/184.2GWh by the end of 2024, a term it appears to use to describe technologies other than pumped hydro energy storage.

What is the demand for energy storage facilities in China?

The rapid growth of renewable energy generation has created a large market demand for energy storage facilities. By the end of the first quarter of 2024, the cumulative installed capacity of new energy-storage projects in China had reached 35.3 million kW.

Is China entering a new era of energy storage demand?

Mainland China accounts for most of the global energy storage demand, driven in the near term by regional requirements for new utility-scale wind and solar projects to include energy storage capacity. However, the Chinese market is entering an era of change.
