New planning for wind solar and energy storage

Overview

What is the implementation plan for the development of new energy storage?

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Does compressed air energy storage reduce wind and solar power curtailment?

Compressed air energy storage (CAES) effectively reduces wind and solar power curtailment due to randomness. However, inaccurate daily data and improper storage capacity configuration impact CAES development.

Do independent energy storage power stations lease capacity?

Independent energy storage stations lease capacity to wind power, PV, and other new energy stations. Capacity leasing is a stable source of income for owners of independent energy storage power stations. The capacity leased can be seen as energy storage capacity built for new energy projects.

Can we combine wind and solar power with traditional thermal energy?

This paper introduces a comprehensive plan that combines wind and solar power with traditional thermal energy and battery storage in our power network. It starts by creating realistic examples of what wind and solar power might look like in the future, using a special kind of AI called GANs.

Does solar-wind system address future electricity demands?

Jiang, H. et al. Globally interconnected solar-wind system addresses future electricity demands. *Nat. Commun.* 16, 4523 (2025). Peng, L., Mauzerall, D. L., Zhong, Y. D. & He, G. Heterogeneous effects of battery storage deployment strategies on decarbonization of provincial power systems in China. *Nat.*

Commun. 14, 4858 (2023).

Can predicting wind and solar power make more money?

In simple terms, this paper shows that by predicting wind and solar power more accurately and using power lines more flexibly, an energy base can make more money, save on costs, and use clean energy more efficiently.

New planning for wind solar and energy storage

In January 2022, the National Development and Reform Commission and the National Energy Administration jointly issued the Implementation Plan for the Development of New Energy Storage during the 14th Five-Year Plan Period, emphasizing the fundamental role of new energy storage technologies in a new power system.

Compressed air energy storage (CAES) effectively reduces wind and solar power curtailment due to randomness. However, inaccurate daily data and improper storage capacity configuration impact CAES development.

Independent energy storage stations lease capacity to wind power, PV, and other new energy stations. Capacity leasing is a stable source of income for owners of independent energy storage power stations. The capacity leased can be seen as energy storage capacity built for new energy projects.

This paper introduces a comprehensive plan that combines wind and solar power with traditional thermal energy and battery storage in our power network. It starts by creating realistic examples of what wind and solar power might look like in the future, using a special kind of AI called GANs.
