Portugal Electricity supplies base station communications equipment

Overview

Who is responsible for electricity supply in Portugal?

Supply: electricity suppliers are responsible for managing the relations with the end customers, including billing and energy-related advice and support. In Portugal, mainland electricity can be sold through suppliers on the liberalised market and under specific circumstances on the regulated market through the supplier of last resort.

How is electricity distributed in Portugal?

Distribution: in addition, electricity is distributed through High, Medium and Low Voltage levels through distribution networks where most of the end consumers are connected. In Portugal mainland most of the distribution networks are handled by one single company, EDP Distribuição, and also by some Low Voltage electricity distribution operators.

How does the Portuguese national transmission grid work?

The Portuguese National Transmission Grid connects the major energy producers to the consumption centres, through delivery points, which supply the major industrial consumers and ensure the connections to the distribution network, from which the majority of the final consumers are supplied.

Does Omexom have EPC references in air insulated substations?

We have EPC references in air insulated Substations up to 400 kV. For electricity transport and distribution substations in medium, high and very high voltage, Omexom supports its client through administrative procedures, provides design studies and ensure civil works, lifting and implementation.

When did the electricity market open in Portugal?

The liberalisation process of the electricity sector of most European countries was carried out in stages, starting with the customers with the highest consumption and highest voltage levels. In Portugal, a similar methodology

was followed and the market opening took place gradually between 1995 and 2006.
