Astoria Energy II is an independently owned facility that has entered into a 20-year supply agreement with NYPA to service its New York City governmental customers.

The project site was the home to a former gas power plant with potential subsurface voids and environmentally sensitive material. In order to avoid potential subsurface issues, the battery ...

Energy storage systems are designed to meet specific storage needs, such as short-term to better regulate the output of a wind or solar plant, or longer-term to better match plant supply and grid demand.

This is a list of energy storage power plants worldwide, other than pumped hydro storage. Many individual energy storage plants augment electrical grids by capturing excess electrical energy during periods of low demand ...

Grid energy storage allows for greater use of renewable energy sources by storing excess energy when production exceeds demand and then releasing it when needed, ...

One of the country's largest battery energy storage sites is about to be built on Staten Island, but families say by the time they learned of the plan, it was already a done deal.

Grid energy storage allows for greater use of renewable energy sources by storing excess energy when production exceeds demand and then releasing it when needed, reducing our reliance on fossil fuel-powered plants and ...

The facility will serve as a large-scale battery energy storage system capable of charging from, and discharging into, the New York power grid. When fully functional, the 100MW battery energy storage project will be able to ...
