## Overview

---

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt.

Today's premium monocrystalline solar panels typically cost between 30 and 50 cents per Watt, putting the price of a single 400-watt solar panel between \$120 to \$200, depending on how you buy it. Less efficient polycrystalline panels are typically cheaper at \$0.25 per Watt.

Take control of your energy costs with solar power. Solar panels generate "free" electricity, but installing a system still costs money. A typical American household needs a 10-kilowatt (kW) system to adequately power their home, which costs \$28,241 in 2025. That price effectively drops to \$19,873.

A solar energy system has multiple components, and photovoltaic modules are only one of them. The National Renewable Energy Laboratory (NREL) publishes the annual US Solar Photovoltaic System and Energy Storage Cost Benchmark, and the latest edition became available in November 2021. The NREL.

The type of solar panel you choose significantly impacts both cost and performance. There are three main types used in residential systems: Monocrystalline: Monocrystalline solar panels are made from single-crystal silicon. They offer the highest efficiency rates, around 15%–22%, and the longest.

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'. This data is expressed in US dollars per watt, adjusted for inflation. IRENA (2025); Nemet.

With utility rates rising and the 30% solar tax credit going away at the end of the year, installing solar in 2025 offers more cost-savings potential than ever before. So, what's standing in the way of American homeowners and solar

panels?

The biggest hurdle is often the perceived “upfront cost” of.

As of 2025, the average cost of solar panels in New York is \$3.30 per watt, making a typical 6.9 kilowatt (kW) solar system \$16,632 after claiming the 30% federal solar tax credit now available. This is higher than the average price of residential solar power systems across the United States, which.

## Prices of solar components

---

Solar panels and inverters are just one element of a photovoltaic system. The prices you get from solar installers include other components and soft costs.
