Rooftop solar power generation wattage

Overview

Rooftop photovoltaic (PV) systems on residential buildings generally have capacities of 5-20 kilowatts (kW), whereas commercial systems can range from 100 kW to 1 megawatt (MW). How much solar power can a roof generate?

The amount of solar power your roof can generate depends on various factors, such as your location, roof size and orientation, solar panel efficiency, shading, climate, and the size of the solar system. But our experts can help you find a solution to meet your energy needs.

What is the minimum roof size for a 10kW Solar System?

This is a standard 10kW solar system, consisting of 25 400-watt solar panels. As we will see in the summarized chart below, the minimal roof size for a 10kW system is only 800 sq ft roof area (600 sq ft viable for solar panels due to 75% code consideration).

How many solar panels can you put on an 800 sq ft roof?

Now, by average solar panel wattage per square foot, we can put a 10.35kW solar system on an 800 sq ft roof. This is how many solar panels you can put on this roof: If you only use 100-watt solar panels, you can put 103 100-watt solar panels on the roof.

How many 400 watt solar panels on a 1000 sq ft roof?

A typical 400-watt solar panel is 79.1 inches long and 39.1 inches wide. It takes up 21.53 sq ft of area. If you have a 1000 sq ft roof, and you can use 75% of that roof area for solar panels, you can theoretically put 34 400-watt solar panels on a 1000 sq ft roof.

How does your roof affect your solar power system?

The physical attributes of your roof play a crucial role in determining the capacity of your solar power system. Your roof area determines how many solar panels you can install, with more resulting in higher energy generation

potential. Additionally, the orientation of your roof to the sun also affects the efficiency of your solar panels.

What is solar panel efficiency?

Solar panel efficiency refers to how well your panels convert sunlight into electricity and it directly impacts the amount of electricity your system can generate and how many solar panels you need. Higher-efficiency panels can produce more electricity with the same amount of sunlight compared to lower-efficiency ones.
