# **Sao Tome and Principe builds hybrid energy for communication base stations**

## Overview

---

As part of this effort, the government has proposed a strategy to electrify off-grid load centers, combining multiple energy solutions from solar, wind, mini-hydropower, and biomass energy sources. What is the Sao Tome & Principe project?

**Brief Description:** The objective of the project is to introduce an integrated energy and ecosystems-based approach to grid/isolated-grid-based mini/small hydro-electricity generation in Sao Tome and Principe by leveraging \$ 20.7 million in multilateral and private sector financing over its five-year implementation period.

How is Sao Tome & Principe generating electricity?

**Medium** The Government of Sao Tome and Principe is strongly motivated to increase and diversify its generation capacity through mini/small hydro power plants and is driven by its plans to increase access to electricity services to the population.

Are there any studies on solar power potential in Sao Tome & Principe?

**2. Solar PV:** As per the publication "Emission Reduction Profile: Sao Tome and Principe", June 2013" prepared by RISO with the support of ACP-MEA & UNFCCC, there are, to date, "no official studies on the exact solar power potential: therefore, further calculations of the emissions reduction potential can be hazardous".

Does Sao Tome and Principe have a national energy policy?

Sao Tome and Principe has not yet developed a National Energy Policy. However, with every change in Government, the incoming Government formulates its development plan with the last one prepared in October 2013 and entitled "Grandes Opções do Plano para 2014" (Major Options of the Plan for 2014).
