Can a wholesale solar company sell surplus solar equipment?

Wholesale solar companies have two main options for selling excess, surplus, clearance, and used PV equipment in the secondary market. They can utilize auction sites, and they can join EnergyBin, the wholesale solar B2B exchange for the world's PV professionals.

Should you sell your solar equipment at a solar auction?

The flexibility to sell single parts comes in handy for legacy models or project leftovers that attract buyers who are looking for replacement parts. While on auction sites, solar equipment lot sizes are large (usually starting at 500 kilowatts and spanning into megawatt levels).

Who is the solar recycling company?

The Solar Recycling Company is the secondary market for new and used solar panels, inverters, battery backup storage. If we cannot recover any value on your solar panels and equipment we can offer a downstream recycling service. Interested in procuring used or refurbished solar panels, inverters, or battery storage?

We ship globally.

What happens when a seller posts solar equipment for sale on energybin?

When a seller posts solar equipment for sale on EnergyBin, the seller

maintains the ability to manage the inventory and make modifications to the listing as needed. The seller chooses to impose a minimum volume order, or the seller can parcel out smaller quantities.

Can solar panels be recycled?

It costs a lot of money and valuable resources to manufacture a solar panel. Our solar panel recycling company is able to recover some of these valuable materials during the recycling process, including silicon, glass, and even copper and silver. These materials can then be recycled to create new products, such as solar panels.
