Solar cell regeneration site in Timor-Leste

Overview

What is a photovoltaic project in Timor-Leste?

Just as the remaining renewable energies sources that are being explored by the Government in Timor-Leste, the photovoltaic units (or solar project) implementation project is specially directed for the families that live in remote areas, where difficulties still exist in the national energy network installation.

Does Timor-Leste need a roof-top solar energy system?

In addition, most of Timor-Leste's electricity is generated through costly and polluting diesel generators. Australia's Market Development Facility (MDF) and ITP Renewables conducted an assessment of the potential market for roof-top solar energy systems in Timor-Leste.

Can solar power reduce electricity costs in Timor-Leste?

Timor-Leste is a country with great potential, and with proper use of solar energy, we can reduce electricity costs by 30-40%". "We thank the Japanese Government and UNDP for their assistance, particularly for the installation of solar panels in rural health posts.

What is Timor-Leste's green energy transformation project?

Launched in 2023 and set to run through 2025, this transformative project has the aim to help Timor-Leste on stepping into the Green Energy Transformation journey, for a more sustainable, inclusive development for all. The installation of solar panels at INFPM is a part of output 2 of this project implemented by UNDP.

Is Timor-Leste a good country for solar energy?

Timor-Leste has a high-quality solar resource. The global horizontal irradiance in Dili is higher than on the east coast of Australia, where the solar market is mature and installation costs are higher. The cost of electricity in Timor-Leste for commercial and industrial consumers is high compared to ASEAN

countries.

How long does a solar system last in Timor-Leste?

High electricity costs and readily available solar radiation mean that the average payback period for a rooftop photovoltaic (PV) solar energy system in Timor-Leste is only 1.5 to 3 years instead of the global average of 6-10 years. Transitioning to solar can also help the country meet environmental commitments.

Solar cell regeneration site in Timor-Leste

Just as the remaining renewable energies sources that are being explored by the Government in Timor-Leste, the photovoltaic units (or solar project) implementation project is specially directed for the families that live in remote areas, where difficulties still exist in the national energy network installation.
