Solar module price supply

Overview

Access Anza's free quarterly PV panel price insights report for pricing data from more than 95% of the U.S. module supply. Does AD/CVD increase solar module costs?

The AD/CVD case on solar cells and modules from Cambodia, Malaysia, Thailand and Vietnam, which began in April 2024 and was finalized on May 20th, 2025, increased module costs by 13% year-over-year across the distributed generation segments.

How big is the solar supply glut in 2024 & 2028?

S&P Global Commodity Insights forecasts global solar additions of 399 GW in 2024, and 465 GW in 2028. This "significant supply glut" has already created an environment of low panel prices and led to a stockpiling of imported Chinese modules in Europe and the US, the IEA said.

How much will solar cost in 2023?

It expects prices to continue falling in the coming years, from an average of about \$250,000/MW in 2023 to roughly \$150,000/MW by 2028. According to S&P Global analysis, US solar levelized costs of energy are forecast to fall from \$39.58/MWh in 2023 to \$28.25/MWh in 2028.

How many GW of solar modules are there in 2023?

The organization said some 90 GW of modules were sitting in warehouses in the European Union at the end of 2023 with a further 45 GW in the US, though some manufacturers have disputed the scale of the stockpiling. Nevertheless, the ongoing oversupply led to module spot prices dropping roughly 50% between January and December 2023, the IEA added.

How much will module prices fall in 2023?

Nevertheless, the ongoing oversupply led to module spot prices dropping roughly 50% between January and December 2023, the IEA added. It expects

prices to continue falling in the coming years, from an average of about \$250,000/MW in 2023 to roughly \$150,000/MW by 2028.

Where are qcells solar modules made?

Over the past year, Qcells expanded its Georgia module factory to 8.4 GW and First Solar expanded production in Ohio to 6.3 GW. Other new capacity comes from Canadian Solar (5 GW modules), Illuminate USA (LONGi/Invenergy) (5 GW modules) and REC Silicon (6 GW polysilicon).

Solar (5 GW modules), Illuminate USA (LONGi/Invenergy) (5 GW modules) and REC Silicon (6 GW polysilicon).

Strong demand for new energy supply and rising power prices strengthen the market fundamentals for new solar projects in the long term. Overall, our low case is 18% ...

U.S. module imports hiked 82% in 2023 to 54 GW on the back of rapidly falling prices. In response, the Biden administration increased tariffs on solar imports from China and Southeast Asia to

The data in the Q2 report represents median distributed generation (DG) list prices from over 35 module suppliers participating in its platform, which Anza reports captures over 95% of the U.S. module supply.

US solar module prices rose in December 2024 for the first time since last summer, driven by tariff adjustments and patent litigation uncertainty, according to Anza.

In the third quarter (Q3) of 2024, module prices rose 1% but stayed near record lows, around \$0.10/ Watt direct current (W dc), as substantial module overcapacity continues ...

The origin of solar cells has had an impact on the price of US solar modules in the past few months, according to a report from solar and storage software company Anza.

The data in Anza's Q2 2025 Solar Module Pricing Insights Report represents median DG list prices from over 35 module suppliers participating in the Anza platform, which ...

In the third quarter (Q3) of 2024, module prices rose 1% but stayed near record lows, around \$0.10/ Watt direct current (W dc), as substantial module overcapacity continues to depress prices.

The world's solar manufacturing capacity is set to remain at more than double annual installations in the coming years, with the dynamics of oversupply continuing to depress panel prices, ...

The data in the Q2 report represents median distributed generation (DG) list prices from over 35 module suppliers participating in its platform, which Anza reports captures over ...
