

## **PDEOZE PowerContainer**

# **Solar on-site energy solar rooftop**

## Overview

---

What is solar rooftop potential?

Solar rooftop potential for the entire country is the number of rooftops that would be suitable for solar power, depending on size, shading, direction, and location. Rooftop potential is not equivalent to the economic or market potential for rooftop solar—it doesn't consider availability or cost.

Can a roof be used for solar?

It looks like this roof may not be ideal for solar, possibly due to shade or rooftop equipment. Use the draw tool (located upper left on map) to see how much energy a solar installation on this roof would generate. NY SOLAR MAP estimates rooftop and ground mount solar electric potential (PV panels) and connects you to local solar resources.

Is rooftop solar a good investment?

Rooftop solar has increasingly become an option for many households across the country. Many areas offer attractive Renewable Energy Credits (RECs) that, when coupled with federal and local incentives, can make rooftop solar an attractive financial choice that is also good for the environment.

Where can you find rooftop solar?

Rooftop solar can be found at data centers all over the world, including at those operated by Yondr, Stellium, and Iomart in the UK; Prosoluce and Denv-R in France; AirTrunk in Malaysia; NextDC in Australia; Meta and Singtel in Singapore; Aruba in Italy; Digital Realty in India; and Orange in Poland, Romania, the Ivory Coast, and Burkina Faso.

Is on-site solar a good choice?

While not a de facto choice – especially for large hyperscale facilities – on-site solar is growing in popularity as companies look to boost their green credentials and save money against high energy costs. Operators large and

small have deployed solar panels to the rooftops of their facilities.

Can solar power be installed on a new roof?

If even a small fraction of these new roofs had solar installations, it could have a significant impact on U.S. solar power generation. For individual rooftops, national laboratories and private companies have developed a number of tools to estimate the amount of solar that could be installed on a given rooftop.
