# Southern European Energy Storage Project Investment

## Overview

---

Is energy storage a good investment in Europe?

Compared to classic renewables, energy storage has really only become an investable asset in Europe over the last few years on the back of technology advances, market price signals, and government support mechanisms.

How do energy storage assets make money in Europe?

For short-duration energy storage assets, there are really three key revenue streams for energy storage assets in Europe. The first one is capacity payments, which have become a broadly implemented policy measure by governments to support system reliability and incentivize the installation of certain new power asset types.

Why should you invest in battery storage in Europe?

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity for investors amid the emerging demand for battery storage, which provides balance to electricity markets.

What is the Energy Storage Summit EU?

The Energy Storage Summit EU, hosted by our publisher Solar Media, takes place in London, UK, this week (18, 19 February). Visit the event site for more details including agenda and how to get tickets. Across two packed days, the Summit focused on three core themes: revenue & trading, the lifecycle of the battery, and optimisation tools.

Is energy storage a good investment in 2025?

Energy storage is one of Europe's fastest-growing asset classes. In today's market, funding follows preparedness. In 2025 and beyond, only projects that combine financial credibility, operational agility, grid-aligned design, and derisked structures will secure investor confidence and move to execution.

What is the European energy inventory storage dataset based on?

Disclaimer: The European Energy Inventory Storage dataset is mainly based on public data and data from Wood Mackenzie. Wood Mackenzie Limited, subject to any additional data modifications and/or input provided by the EC or any of its authorised 3rd party contributor. Last update: 15/10/2025

The strategic partnership will focus on developing greenfield battery energy storage system (BESS) projects to ready-to-build status across the three markets, with further ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new opportunity for investors ...

The European Union has established essential policies that drive investment into energy storage projects. Both the Clean Energy for All Europeans package and the European ...

As Southeast Europe moves toward renewable energy, Battery Energy Storage Systems (BESS) play a key role in stabilising the power grid. These systems store excess ...

In the most-likely scenario for 2025, 29.7 GWh of battery storage will be installed in Europe, representing a 36% annual growth. By 2029, the report anticipates a sixfold increase ...

By leveraging innovative funding strategies, overcoming investment barriers, and harnessing technological advancements, the continent is poised to unlock the full potential of energy storage and ...

By leveraging innovative funding strategies, overcoming investment barriers, and harnessing technological advancements, the continent is poised to unlock the full potential of ...

As Southeast Europe moves toward renewable energy, Battery Energy Storage Systems (BESS) play a key role in stabilising the power grid. These systems store excess energy during low-demand ...

As the renewable energy sector rapidly evolves, battery energy storage systems (BESS) are emerging as a critical pillar for decarbonization. However, with capital constraints ...

In Europe, the capacity of renewable energy sources is growing very rapidly, while traditional power plants are slowly being decommissioned. That's creating a unique new ...

The European Commission has identified existing mechanisms as insufficient and has proposed the introduction of a pan-European scheme to support flexibility. Energy storage futures are likely to emerge in the ...

Dive into the map of Energy Storage Projects using interactive tools and filter options by status, technology, subtechnology, and more.

It is in some ways replicating the business model it has used in the UK, Italy, Australia and Sweden so far--entering equity investment and joint development agreements ...

It is in some ways replicating the business model it has used in the UK, Italy, Australia and Sweden so far--entering equity investment and joint development agreements with local development partners to embark ...

The European Union has established essential policies that drive investment into energy storage projects. Both the Clean Energy for All Europeans package and the European Green Deal support objectives for ...
