## Overview

---

The lithium-titanate or lithium-titanium-oxide (LTO) battery is a type of rechargeable battery which has the advantage of being faster to charge than other lithium-ion batteries but the disadvantage is a much lower energy density. Uses Titanate batteries are used in certain Japanese-only versions of as well as An.

A battery is a modified lithium-ion battery that uses lithium-titanate nanocrystals, instead of , on the surface of its . This gives the anode a surface area of about 100 square meters per gram, c.

The Log9 company is working to introduce its tropicalized-ion battery (TiB) backed by lithium ferro-phosphate (LFP) and lithium-titanium-oxide (LTO) battery chemistries. Unlike LFP and LTO, the more popular NMC (Nick.
