Integrating storage in the electric grid, especially in areas with high energy demand, will allow clean energy to be available when and where it is most needed. New York State has some of the most rigorous safety standards for energy storage projects in the country, reinforced by independent.

Local Law 181 of 2019 (LL181) requires the City of New York to conduct a feasibility study on the applicability of different types of utility-scale energy storage systems (ESS) on City buildings and to install such systems on those buildings where cost effective.¹ NYC's Department of Citywide.

NYCIDA closed its largest battery energy storage project to date, the East River Energy Storage Project, located on an industrial site on the East River in Astoria, Queens. When built, the facility will be able to hold up to 100 megawatts (MW) and power over tens of thousands of households. Once.

Further, energy storage systems will allow New York to meet its peak power needs without relying on its oldest and dirtiest peak generating plants, many of which are approaching the end of their useful lives. As an important first step in protecting public and firefighter safety while promoting.
