Match the inverter's continuous wattage rating to the battery's discharge capacity. For a 12V 200Ah battery (2.4kWh), a 2000W inverter is ideal. Formula: $\text{Inverter Wattage} \leq (\text{Battery Voltage} \times \text{Ah Rating} \times 0.8)$. Factor in surge power needs but prioritize sustained loads. Always check the battery's.

To choose the right inverter size for your specific power needs, first calculate your total power requirements in watts. Multiply the battery capacity (in Ah) by its voltage (typically 12V). For example, a 200Ah lithium battery at 12V provides 2400 watt-hours. Select an inverter that meets or.
