When is the lowest price for solar panels

Overview

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024.

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024.

That price effectively drops to \$19,873 after considering the full federal solar tax credit. NOTE: Under the “One Big Beautiful Bill Act” signed in July 2025, the federal solar tax credit is now set to expire at the end of the year, much earlier than previously expected. You must install and pay.

As of 2025, the average cost of residential solar panels in the U.S. is between \$15,000 and \$25,000 before incentives. This typically translates to about \$2.50 to \$3.50 per watt of installed capacity (more on price per watt below). The total price depends on your system size, location, roof type.

SolarReviews is the leading American website for solar panel reviews and solar panel installation companies. Our industry experts have a combined three decades of solar experience and maintain editorial independence for their reviews. No company can pay to alter the reviews or review scores shown.

EnergySage has released its 20th semiannual report, showing that residential solar panel prices hit an all-time low in 2024. Analyzing millions of transaction-level data points from homeowners on EnergySage, it highlighted a clear milestone for solar panels: The average price had dropped 30%. How much do solar panels cost?

The price of solar panels changes depending on where you live, but the average for installation is just under \$29,000 or \$2.75 per watt. On the high end, we talked to a solar customer in Hawaii who spent \$100,000 going solar. Dion in Nevada said their 10-kW system cost about \$20,000, which is about the national average price for a 7-kW system.

Are cheap solar panels worth it?

It's important to realize that even cheap solar panels will still require a substantial upfront investment. Solar panels account for just 12% of a solar installation's total costs, so even choosing more affordable solar panels only lowers the price by a few hundred dollars.

How much do solar panels cost in 2025?

One of the biggest barriers to installing solar panels is the significant upfront cost. In 2025, the average price of a solar installation is about \$21,816 before any incentives are applied. While this \$3.03 per-watt price tag is lower than solar panels have cost in the past, it's still a significant upfront investment.

How much does a home solar system cost?

In 2025, we surveyed 1,000 home solar customers across the U.S. to understand their experience shopping for and installing solar panel systems. Most homeowners said they paid around \$16,129 for a solar panel system, with an average of 14 solar panels installed.

Why are solar panels so expensive?

Since 2010, the cost to install solar panels on a home has fallen by roughly 50%. Costs rose slightly from 2020-2023 largely due to supply chain tangles from the pandemic, and then fell again in 2024. Prices have ticked upward slightly in 2025 due to tariffs and a rush for solar before the 30% consumer solar tax credit expires on December 31, 2025.

How much does a solar battery cost?

A single solar battery typically costs, on average, \$5,097, depending on capacity, type, and brand.* For whole-house backup systems with more than 25 kWh capacity, costs can exceed \$25,000, not including installation. The price varies significantly based on storage capacity and brand.
