Wind Solar and Storage Foreign Trade

Overview

The IEA's Renewable Energy Market Analysis program establishes guidelines for international trade of renewable energy components, particularly focusing on solar PV modules, wind turbines, and energy storage systems.

Wind Solar and Storage Foreign Trade

Many countries face crippling tariffs, restrictive regulations, and fragmented trade policies that slow the deployment of clean energy solutions. Addressing these challenges requires a coordinated global effort.

Battery storage accounted for the second-largest share of total generating capacity additions, rising by 64% to 7.4 GW. 6 Excess wind and solar generation is the third-largest use ...

Most developing countries are slipping into traditional trade patterns, exporting raw materials for solar and wind energy technologies while importing intermediate and finished products. Better ...

In 2015, clean energy supply chains were somewhat diversified. [i] Today, China is by far the largest producer of most of the intermediary and finished goods that feed into global ...

Battery storage accounted for the second-largest share of total generating capacity additions, rising by 64% to 7.4 GW. 6 Excess wind and solar generation is the third-largest use case that utilities report for ...

Most developing countries are slipping into traditional trade patterns, exporting raw materials for solar and wind energy technologies while importing intermediate and finished products. Better trade policy can help ...

Many countries face crippling tariffs, restrictive regulations, and fragmented trade policies that slow the deployment of clean energy solutions. Addressing these challenges ...

ENERGY TRANSITION PERSPECTIVES: SOLAR AND WIND In this extract from a recent webinar held in June 2025, we look at how solar and wind projects are being affected by ...

U.S. oil & gas companies could see a rise in production costs, thereby affecting long-term contracts with international partners. For instance, some major countries that export ...

Clean or dirty, the U.S. energy industry likely will be hard-hit. The trade war is a fast-moving and chaotic story. At the time of publication, the United States has imposed tariffs of 145 percent on most Chinese ...

In 2015, clean energy supply chains were somewhat diversified. [i] Today, China is by far the largest producer of most of the intermediary and finished goods that feed into global solar, wind, battery, ...

The IEA's Renewable Energy Market Analysis program establishes guidelines for international trade of renewable energy components, particularly focusing on solar PV modules, wind turbines, ...

While wind's competitive position may improve relative to solar and storage in some scenarios, as those industries are more dependent on imports, the tariffs introduce new uncertainties and risks that must be ...

Clean or dirty, the U.S. energy industry likely will be hard-hit. The trade war is a fast-moving and chaotic story. At the time of publication, the United States has imposed tariffs ...

While wind's competitive position may improve relative to solar and storage in some scenarios, as those industries are more dependent on imports, the tariffs introduce new ...

The United States has become increasingly reliant on imported components for key clean energy technologies like solar panels, wind turbines, and batteries. China produces over 95 percent of the ...

The United States has become increasingly reliant on imported components for key clean energy technologies like solar panels, wind turbines, and batteries. China produces over ...

The IEA's Renewable Energy Market Analysis program establishes guidelines for international trade of renewable energy components, particularly focusing on solar PV ...
