Yemeni household energy storage power supply production

Overview

What is energy in Yemen?

Energy in Yemen describes energy and electricity production, consumption and import in Yemen. Yemen is net energy exporter. Primary energy use in Yemen was 87 TWh and 4 TWh/million people in 2008 and 88 TWh (4 TWh/M) in 2009.

Is Yemen an energy exporter?

Yemen is net energy exporter. Primary energy use in Yemen was 87 TWh and 4 TWh/million people in 2008 and 88 TWh (4 TWh/M) in 2009. According to the World Bank, Yemen has the lowest level of electricity connection in the Middle East, with only 40% of the population having access to electricity. Rural areas are particularly badly affected.

How many kilowatt-hours of electricity does Yemen produce?

In 2004, Yemen's diesel-run power plants generated 4.1 billion kilowatt-hours of electricity, a level of production that is insufficient to maintain a consistent supply of electricity.

What type of electricity is used in Yemen?

Renewable electricity here is the sum of hydropower, wind, solar, geothermal, modern biomass and wave and tidal power. Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income settings. Is biomass a source of electricity in Yemen?

Traditional biomass – the burning of charcoal, crop waste, and other organic matter – is not included. This can be an important source in lower-income

settings. Yemen: How much of the country's electricity comes from nuclear power?

Nuclear power – alongside renewables – is a low-carbon source of electricity.
